Research Experience

Graduate Student Researcher, Pitt Summer 2017 – Present
Research Advisor: Prof. Carles Badenes
Topics: Doctoral research on stellar multiplicity using APOGEE radial velocity and stellar parameters. Developed a Monte Carlo script to simulate radial velocity observations of binary star systems to characterize completeness and selection effects in APOGEE targeting strategies.

Undergraduate Student Researcher, Miss. State Summer 2015
Research Advisor: Prof. Jim Dunne
Topics: Wrote a script in C to evaluate the thermodynamic performance of a heater for the cryogenic hydrogen system of targets at the Thomas Jefferson Accelerator Facility.

Undergraduate Research Assistant, Miss. State Summer 2013 – Spring 2016
Research Advisor: Jim Gafford
Topics: Managed the Advanced Electronics Laboratory in the Center for Advanced Vehicular Systems. Built prototype circuit boards using the lab's milling machine, soldered the boards' components, and assisted with prototype testing. Completed training in ITAR compliance. Characterized a Simulink model file for a vehicle's powertrain.
